PVC VINYL TUFF FLEX STRIP DOORS

Guaranteed to save energy when installed properly!

Tuff Flex Strip Doors Save Energy in Walk-in Coolers, Freezers and Cold Rooms

Stop Wasting Energy - Install strip doors on walk-in coolers and freezers and start saving money immediately! When walk-in doors are left open, warm air rushes in to cause an immediate increase of inside walk-in temperatures!

Keep Perishables Colder and Increase Shelf Life - Perishable foods increase shelf life up to 50%, especially those stored close to the entrance!

Reduce Compressor Damage - Compressor life will be extended, coil icing and damaging frost will be minimized and the overall efficiency of your refrigeration will immediately be maximized!

Tuff Flex Strip Doors Improve Employee Moral and Warehouse Conditions

Save on Expensive Energy!

Block Out Loss of Temperature Controlled Air - When dock doors are open, the inside air is pulled outside by natural forces and causes energy loss. Watch your energy consumption go down and profits rise using PVC strip doors.

Increase Employee Morale!

Block Out Wind and Temperatures - Employees no longer need to suffer undue discomfort when temperatures soar or plunge outside, making the conditions in your warehouse intolerable and unworkable.

Stop Unsanitary Conditions!

Block Out Flying Insects, Birds, Dust and Debris - Solve unsanitary conditions that are created by flying insects, birds, dust and debris while dock receiving doors are open.

Custom PVC Strip Doors/Curtains for Any Application

**Truck Doors ♦ Welding Booths ♦ Noise Barriers ♦ Labs and Clean Rooms
Conveyor Systems ♦ Smoking Areas ♦ Barns and Stables ♦ Patio Doors**

Reduce fuel consumption up to 50% in refrigerated trucks. Deliver fresher, colder products to your customer creating a profitable and competitive edge for your business.

PVC strip doors are inherently sound resistant(see diagram # 1, page 6). Strips can be installed in areas where loud noises needs to be suppressed.

PVC strip doors also are used to separate areas to control, dust, sound, smoke, fumes and in areas needing absolute cleanliness and sanitation.

PVC VINYL TUFF FLEX STRIP DOORS (CONTINUED)

This product is Guaranteed to Save Energy when Installed Properly

[Restaurants/Hotels] [Convenience Stores] [Supermarkets] [Hospital] [Convalescent Homes]
 [Dairy/Ice Cream] [Frozen Food Plate] [Food Processing Plants] [Refrigerated Transportation]
 [Large Storage Warehouses] [High Technology Labs] [Space Research Centers]
 [Armed forces Comissaries] [Aircraft Terminals] [Post offices] and many more!!!

Material Specifications:

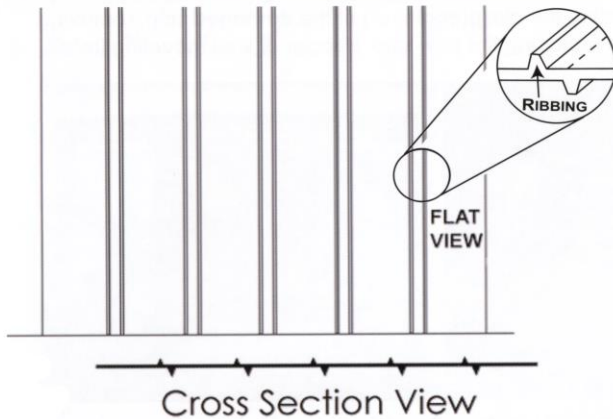

Strip Widths: 4", 6", 8", 12", 16", 24", 48"
 Temp Range: -55°F to + 200°F depending upon application
 Gauges: .04, .06, .08, .125, .160 mil
 Material: Flexible, clear polyClear PVC, slightly tinted, rounded edges. Most materials USDA/FDA accepted, non-toxic and non-porous. Welding material approved by the California Fire Marshall and Rated UL94.

Strip Curtain Model Numbers

Gauges Available: .04, .06, .08, .125, .160
 Strip Width: 4", 6", 8", 12", 16", 24", 48"
 Percent Overlap: 33%, 50%, 66%, 75%, 100%
 Example: Gauge Width Overlap
 Model WS 06650 .06 6" 50%
 (.60 mil material, 6" strip width, 50% overlap)
 Model WS 121266 .125 12" 66%
 (.120 mil material, 12" strip width, 66% overlap)

Ribbed Material

Features:

- ◆ Scratch resistant from the use of forklifts, pallet jacks, crates, truck and cargo traffic
- ◆ Exceptional durability...Lasts significantly longer than our standard smooth PVC material
- ◆ Resists scratching and stays clearer longer
- ◆ Added energy savings by creating an air barrier between the strips which acts as insulation
- ◆ Reduces static electricity
- ◆ Available in 8", 12" and 16" widths.

Sound and Noise Reduction

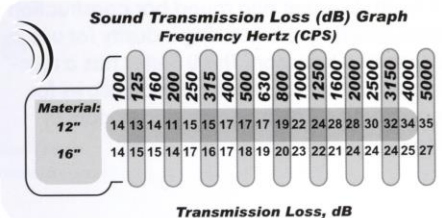

PVC strip curtains act as an ideal sound barrier. Our high quality .08 gage material weighs ½ lb. per square foot and with the proper overlapping can prevent and contain noise in any area.

An additional absorption material may be required to prevent sound from bouncing against the PVC barrier. Please contact factory for the availability of acoustical foam materials required for your application.

When dealing with sound attenuation, it is important to remember that decibel (dB) ratings are geometric in nature. As an example, a 10 dB reduction in noise levels at a high Hertz (CPS) rating will result in a change of very uncomfortable range to a comfortable working environment.

Diagram #1

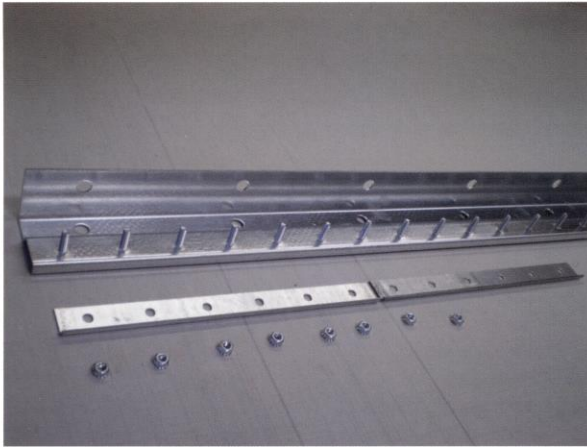

Sound/Noise Transmission loss graph for 12" and 16" wide PVC material with full overlap. This noise reduction is achieved when assembled to manufacturers specifications and instructions.

PVC VINYL TUFF FLEX STRIP DOORS HARDWARE

Hardware Options for PVC Strip Doors

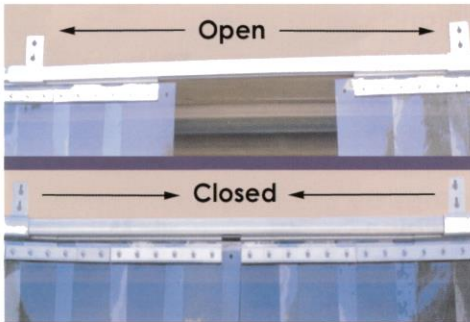

Universal Hardware System

Our Universal Hardware System is designed for industrial applications. Studs on 2-inch centers allow for easy installs and easy replacement of PVC strips. This hardware can be mounted on the wall, inside the header/frame, on the ceiling or anywhere you choose.

Aluminum Bar Hardware System

The Aluminum Bar Hardware System allows for easy install and easy replacement of PVC strips. Individual strips can be replaced without disturbing or removing other strips by simply replacing the clasp(engineer) of the damaged strip, removing it and replacing the new strip. Header or wall mounting install.

Sliding Track Hardware System

This unique sliding track hardware allows the clear vinyl strips to be mounted on trolleys that can be pushed completely clear of the opening, all to one side (or) evenly separated 50/50 to each side.

Sliding Truck & Reefer Door System

Our tough duty sliding truck door system is the perfect answer for trailer and refrigerated trucks that must maintain cold temperatures inside while unloading. Four panels of clear PVC are hung where two panels remain stationary and the two panels in the middle slide one to each side, right and left. This allows for an opening size for forklifts to pass through without having to traverse PVC strips.

U Series Hardware System

The U Series bracket and round bar construction is heavily used by the trucking industry for use in refrigerated transport. The U Series has a removable bolt in the "U" bracket which allows for the easy removal of the entire strip curtain in minutes.
